

# TRADELENS FOR BCOs

Discover new ways to work with your supply chain partners and manage your shipments from booking to delivery.

Explore three use-cases that illustrate how TradeLens works specifically for BCOs to improve logistics management, systems integration and profitability with next-generation digital document handling.

## BCO USE-CASES:

1. LOGISTICS MANAGEMENT p. 2
2. API INTEGRATION p. 5
3. DRIVE PROFITABILITY p. 8

# DITCH THE HASSLES, TAKE CONTROL OF YOUR SUPPLY CHAIN

Improve proactive management of supply chain partners with a steady flow of digital milestones and documentation straight to your control tower

## THE CHALLENGE

Cross-border containerized supply chains are some of the largest and most complex business ecosystems in the world today. It's not uncommon for 30 independent parties, 100 people and up to 200 exchanges of information to be connected to a single shipment.

With increased complexity comes increased cost. Shippers or beneficial cargo owners (BCOs) need consistent, reliable rich-data from multiple sources to effectively manage their supply chains. Supply chain partners may have the data they need – but today, accessing and sharing them often requires laborious communication procedures and expensive peer-to-peer EDI systems.

Access to trusted, live data aggregated from up and down the supply chain would have a significant impact on the effectiveness of in-house logistics management.

**Together, supply-chain partners have the information that every shipment requires for fast, efficient movement. Digital workflows based on ultra-secure cloud and blockchain technology offer a powerful new way for disparate partners to cooperate for everyone's benefit.**

*PennState Smeal; Penske Logistics; Infosys; Korn/Ferry, 2018*

75%

of shippers, and their 3PL partners, plan to invest in supply chain visibility/control towers within the next two years, and more than half of shippers and 3PLs are investing in predictive analytics.

**\$95.6  
BILLION**

Total logistics expenditures by supply chain services organizations in 2017.

93%

of shippers said improved, data-driven decision-making is essential to the future success of supply chain activities and processes.

# THE TRADELENS SOLUTION

TradeLens is a secure platform that gives you timely end-to-end supply-chain visibility and data direct from the source. These benefits extend to you and your trading partners and form the foundation of a new generation of shipper control towers.

## WHAT YOUR TEAM NEEDS TO DO

## HOW TRADELENS CAN HELP

### Ensure freight fluidity

Collect data from the essential organizations involved with your shipment to increase response speed, reliability and reduce downtime.

Access more than 120 precise industry standardized planned, estimated and actual shipment milestones and document events.

### Preempt transport challenges

Identify exceptions or updates to critical transport plans. Manage vendors across the supply chain for reliability, accuracy and timeliness.

Subscribe to notifications for key milestones exceptions or document amendments. Use TradeLens APIs to enhance control and manage vendor performance.

### Reduce infrastructure costs

Utilize cost-effective processes to connect with and manage multiple supply-chain service providers.

Open APIs enable real-time data transfer between supply chain participants via publish, subscribe, query and doc share functions.

### Store critical data and documents

Aggregate data and documents for improved exception management and audit control.

Document sharing and version control underpinned by blockchain guarantees the immutability and traceability of documents. This allows parties to quickly see when changes have been made, and by whom, along a consignment journey.

### Streamline communication

Cut down on laborious and costly query-and-chase communications.

Structured documents and permission management can be combined to automate multi-party or multi-step trade processes.

# STAY AHEAD OF YOUR DELIVERIES AND OFFER REAL-TIME SALES SUPPORT

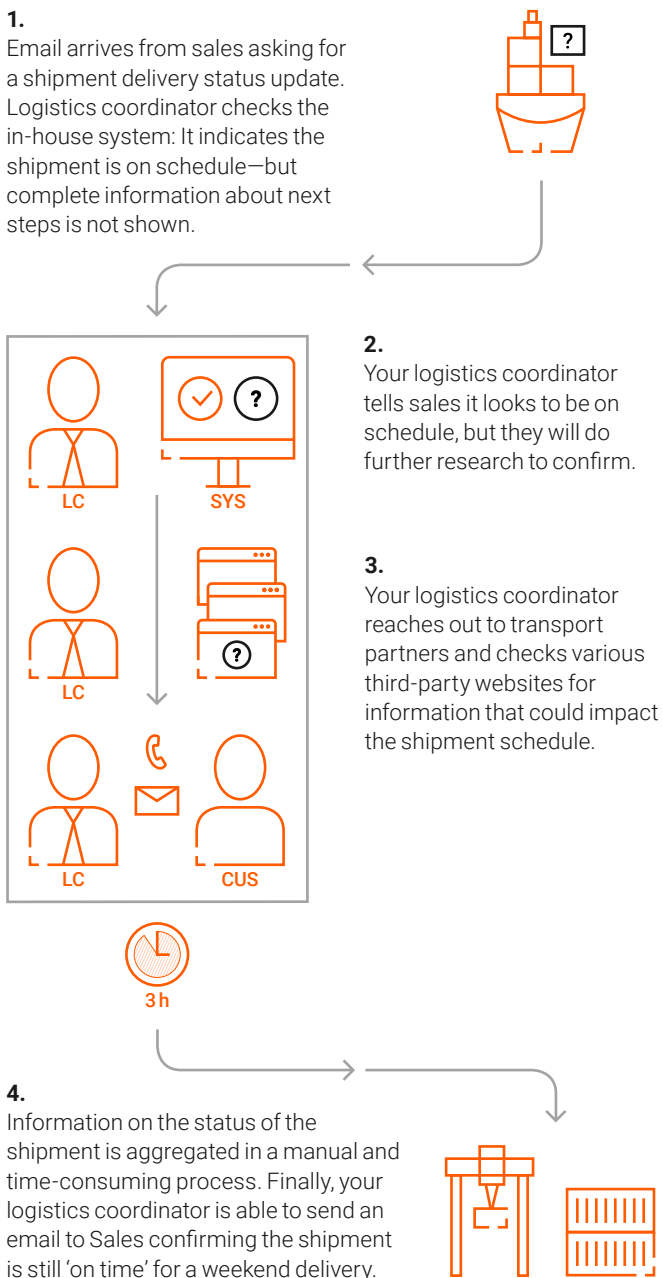

Your logistics coordinator receives a request from the sales team for an update on a shipment expected at the warehouse ahead of the Monday morning management meeting.

Today, your logistics coordinator might check an in-house system and find the information isn't current, then need to inquire with various

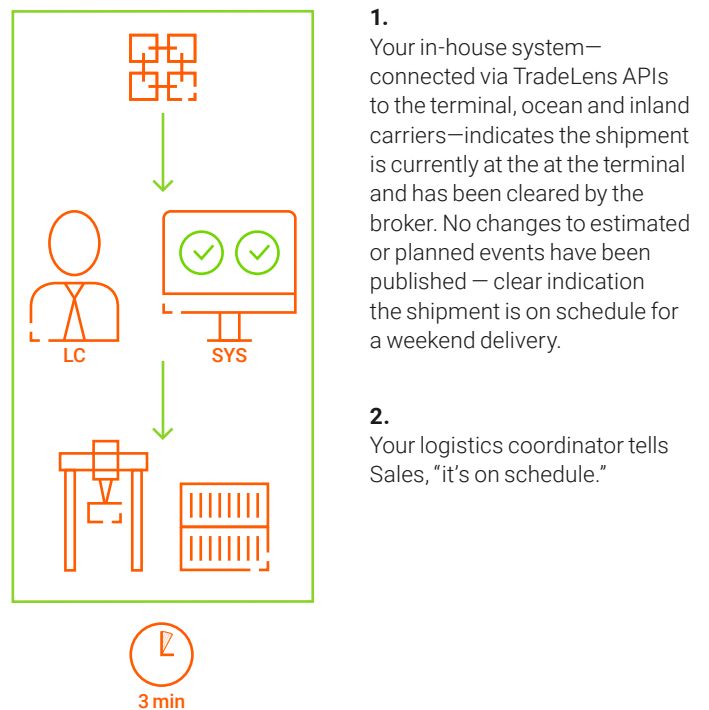

supply-chain partners and conduct manual research to report back. The process of answering the sales team's simple question can be cumbersome and time-consuming.

**Now let's see how TradeLens enables collaboration and real-time data-sharing:**

## TODAY

## WITH TRADELENS

# SIMPLIFY INTEGRATIONS WITH YOUR LOGISTICS PROVIDERS

Take steps to create innovation for your business and reduce implementation time and costly maintenance.

## THE CHALLENGE

CIOs running international logistics operations today need to monitor technology and vendor contracts, ensure security for their partners, oversee integration strategies, and above all, manage costs. They also need to embrace disruptive technologies while maintaining the operational reliability that underscores their brands' reputations.

EDI has been the industry default for decades, but just as with other industries, digital transformation is underway. It's no longer viable to rely on data that isn't coming to you in real-time, that requires phone calls and emails to track processes that should be automated. Freight EDI is costly to set up and maintain, requires higher headcount, and frequently breaks down.

The ability to focus on flexibility and speed — not only in software development and deployment but in the general business — will allow CIOs to drive their organizations forward.

**Moving from an EDI set-up to a cloud-based, ultra-secure API-driven platform that handles not only shipping data, but also digital documents is the transformation that will reward first-movers and offer immediate cost savings.**

*Cerasis & Project 44, 2019*

of the industry polled is still using EDI

of respondents are frustrated with the technology — but of the 57% that aren't, there is a strong sense that EDI's days are numbered

are considering web service APIs as an alternative to EDI

# THE TRADELENS SOLUTION

TradeLens is a secure platform that gives you flexible connectivity for end-to-end supply-chain visibility and data direct from the source. These benefits extend to you and your trading partners and allow simple and seamless integration of information from multiple industry providers.

## WHAT YOUR TEAM NEEDS TO DO

## HOW TRADELENS CAN HELP

### Ensure security of systems at all times

Keep the systems that run your corporate network, as well as the network itself, running, 100% of the time.

TradeLens is built to IBM IT security standards. We are using third-party specialists for penetration testing and ISO 27001 compliance.

### Identify savings and efficiencies when integrating

Deploy products and services to the business network with agility and speed.

Free up your teams from integrations with your supply chain partners and redeploy to value adding or R&D work. Reduce EDI maintenance costs with a family of open-standard APIs for real-time data transfer between supply chain partners.

### Provide access to information for the right people at the right time

If something goes wrong, you and your vendors need to act quickly to identify potential root causes.

Using Hyperledger Fabric permissioned blockchain guarantees the immutability, privacy, and traceability of all shipping data, documents and versions.

### Manage access to systems

Govern who has access to your systems and data at the individual level.

Federated authentication based on OpenID Connect and OAuth2 and flexible access models control who can view, publish and subscribe to shipment-specific data.

### Be flexible

Connect to 3<sup>rd</sup> party systems, even without APIs already deployed in your business.

TradeLens Data integration can map and automate EDI feeds and other data formats from existing infrastructure systems to the platform where needed.

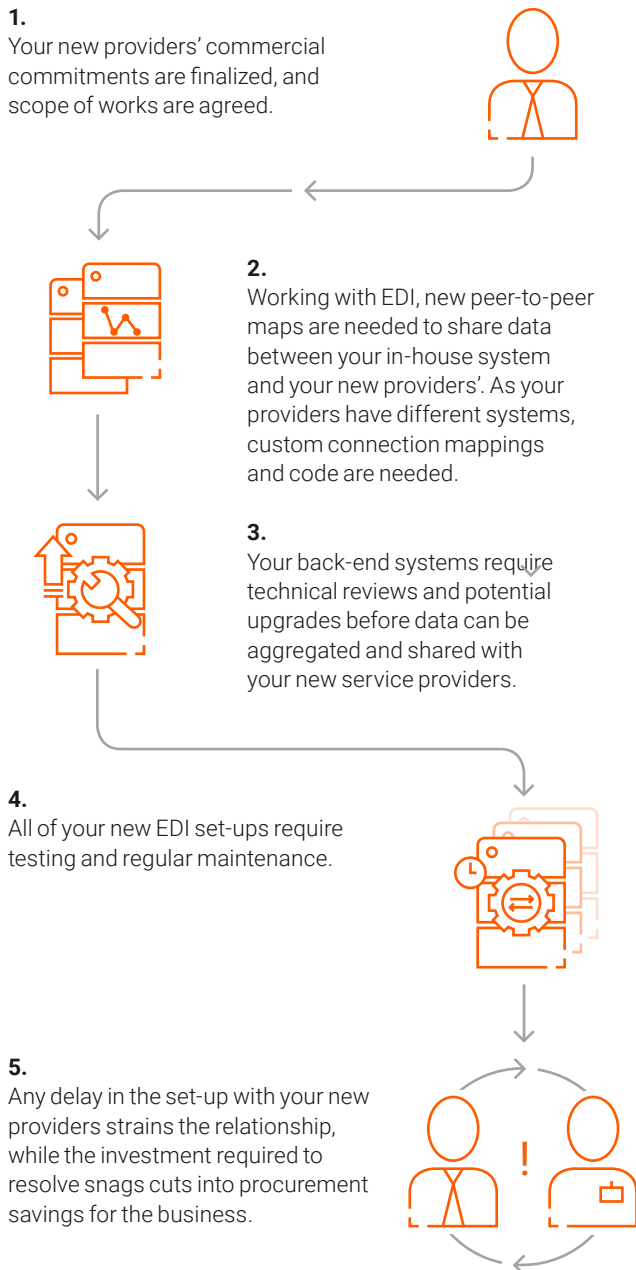

# INTEGRATE DATA EASILY AND MOVE TO DIGITAL DOCUMENT WORKFLOWS

Your logistics team is onboarding new service providers at the completion of a tender process designed to find transport savings.

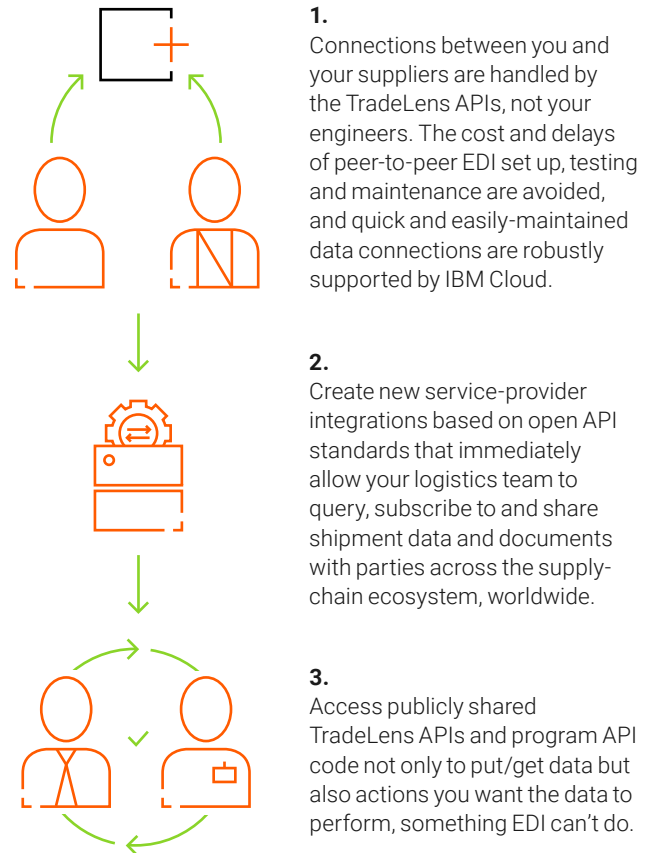

Today, an EDI system integration is expensive and complex to set-up and maintain. Apparent return on investment is dropping rapidly as new technologies promise quick solutions.

**Let's take a look at how TradeLens APIs help your IT implementation team handle integration workflows and collaborate with new and existing supply-chain partners.**

## WITH TRADELENS

### 3. DRIVE PROFITABILITY

# DRIVE PROFITABILITY WITH END-TO-END SUPPLY CHAIN VISIBILITY AND INVOICE RECONCILIATION

Reduce capital and operational costs in communications and third-party service provider management

## THE CHALLENGE

Managing the smooth flow of containerized freight is a strategic imperative for companies operating in the global marketplace. CFOs understand that their supply-chain has a direct impact on cash flow and the bottom line of their business. Not only are inventory handling and delivery timelines tethered to their companies' profitability, they are now a core part of a brand's reputation.

Running a reliable supply-chain operation and keeping the impact and cost of disruption to a minimum are just as much the CFO's goal as the logistics teams'. And with dozens, hundreds or sometimes thousands of invoices from third-party supply chain service providers to manage, CFOs are eager for tools that can reduce or even eliminate the cost of reconciliation.

**Access to verifiable, unassailable and accurate, time-stamped shipping information would have an immediate cost-reduction effect on invoice reconciliation and contribute to smoother, less costly operations.**

<sup>1</sup>2019 State of Logistics Report, Council of Supply Chain Management Professionals (CSCMP) and A.T. Kearney. <sup>2</sup>Freight Payment and Auditing Services: Cash is King, Inbound Logistics. <sup>3</sup>Freight Payment Solutions, U.S. Bank.

## \$1.64 TRILLION

The current spend on logistics in the U.S., which has grown by 11.4% in the last year to 8% of U.S. GDP<sup>1</sup>.

## 3%–8%

The average recovery on freight billing errors<sup>2</sup>.

## ONE IN 10

Ratio of accurate freight invoices<sup>3</sup>

# THE TRADELENS SOLUTION

TradeLens helps CFOs to manage costs associated with supply-chains by providing access to a secure, flexible platform for end-to-end supply-chain visibility and data direct from the source. These benefits extend to you and your trading partners and allow improvements in freight auditing and invoice reconciliation.

## WHAT YOU NEED

## HOW TRADELENS CAN HELP

### Unassailable invoice data to reduce reconciliation costs

Integrating operational, rate and financial information to identify incorrect invoices is required for better financial and cash flow management

The TradeLens framework of more than 120 shipment event types, communicated directly from the source, includes document events and planned, estimated and actual transport milestones.

### To identify and assess questionable invoices

Sorting through invoices received without clear identifiers against job numbers creates significant time lags, not to mention, challenges in matching charges as per contracted rates.

TradeLens structured documents are built to industry standards, meaning that the data and information within all shipping documents can be readily located, analyzed and interpreted.

### New ways to cut down on costly operational processes

Your manual workflows when managing a dispute can be significant. Note only in raising the dispute but in following up for responses and a resolution.

Using Hyperledger Fabric permissioned blockchain guarantees the immutability, privacy, and traceability of all shipping data, documents and versions.

### Ensure increased first time hit ratios and reduce time from invoice received to paid

Simplified data direct from the source can prompt smart contracts automating the payment flow.

TradeLens supported invoicing allows rate checks during the transportation journey. Identify additional charges, like detention and demurrage, prior to invoices being received.

### Audits that can be executed and concluded with minimal effort

At quarter or year-end books need to balance and accruals should be released. If disputes are still open, another round of tedious manual intervention could be required.

Each time a document is amended and published a new version of the document is created. With blockchain, a digital audit trail of changes is dynamically maintained for compliance management.

# ELIMINATE INVOICE UNCERTAINTIES WITH BLOCKCHAIN-SECURED SHIPPING DATA DIRECT FROM YOUR SUPPLIERS

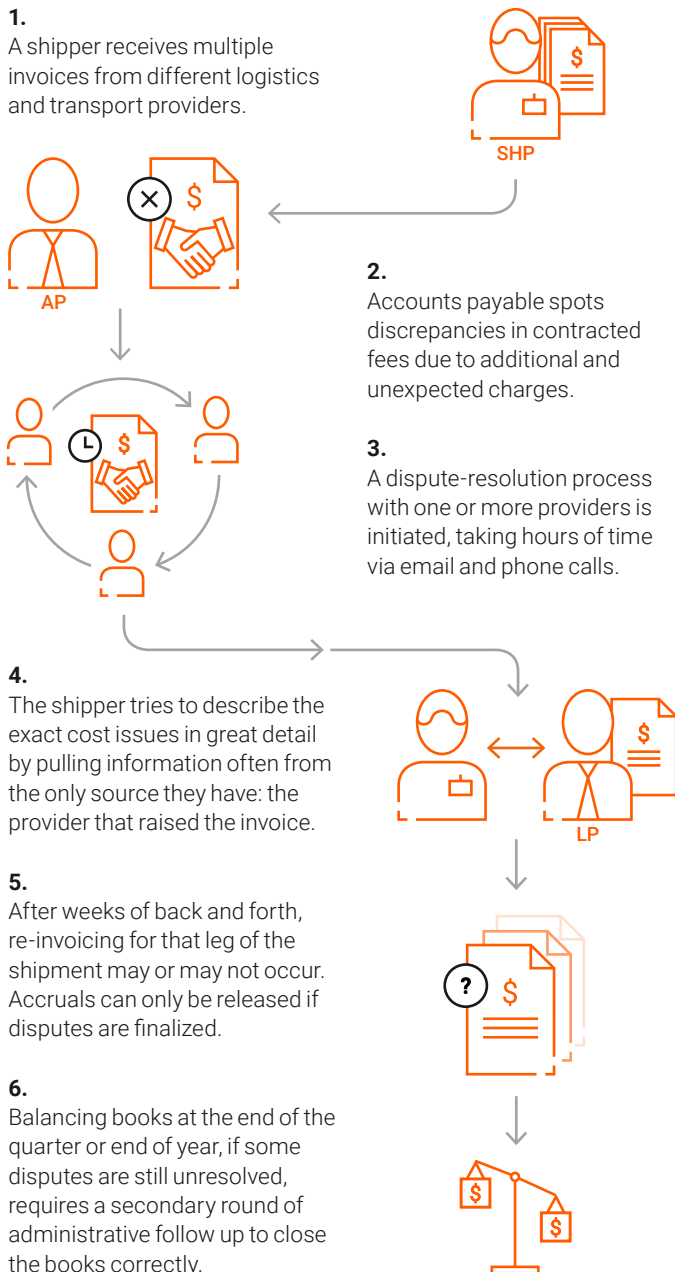

Accounts payable receives multiple invoices from several different organizations involved in the delivery of goods.

Today, when disputes arise over additional charges, for example, detention and demurrage, information that can validate corresponding dates and times is limited and can often only be sourced from the creator of the invoice. Consolidating, vetting and approving supply-

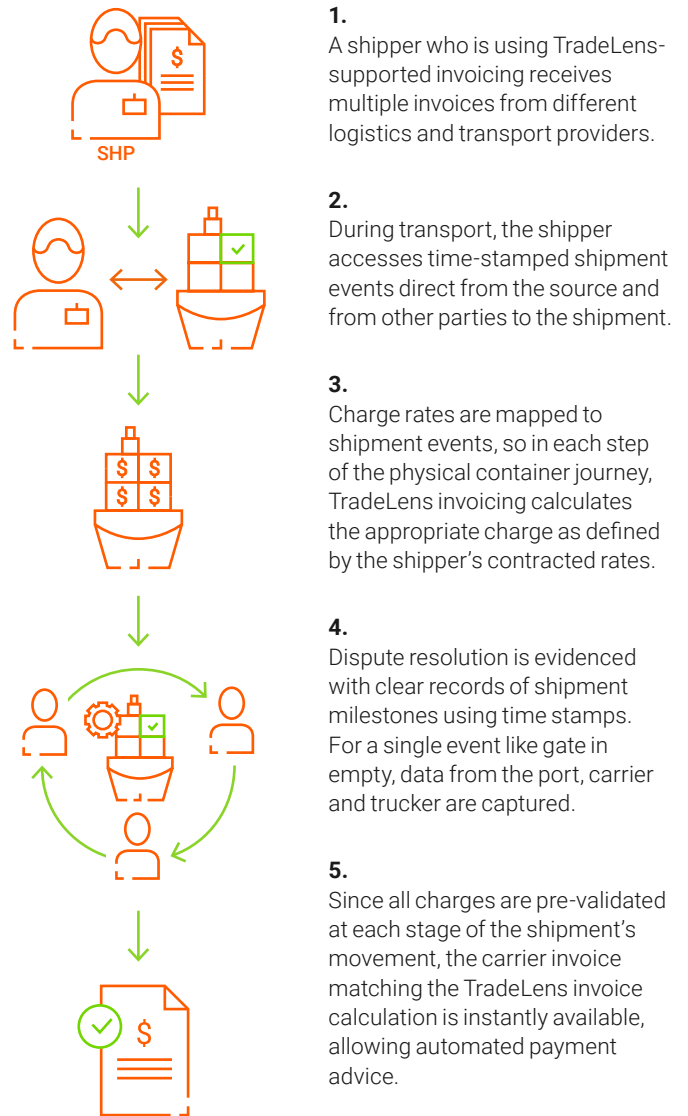

chain invoices is a manual and time-consuming process. So is balancing the quarterly or year-end books if disputes are not concluded in a timely manner.

**Now let's take a look at how invoicing with TradeLens-supported applications can reduce delays in disputes and ensure invoices are accurate for first time hit rates.**

## TODAY

## WITH TRADELENS

## IN PRACTICE

In a recent pilot, a shipper using TradeLens found they were able to significantly improve their ability to effectively respond to the question, “Did the vessel leave yet?”, reducing their staffing from ten steps and five people

TradeLens saved the shipper an average of **33 minutes** of emails, phone calls and manual EDI entry—per shipment. That translates to a savings of more than \$100,000 over the course of handling thousands of shipments each year. It also free’s up your best staff to focus on higher value customer engagement.

## WITH TRADELENS YOU CAN

- + Integrate seamlessly to multiple supply chain parties via the platform business model.
- + Support your internal and external stakeholders with access to secure, authenticated information and key shipping documents.
- + Be confident that you are providing accurate updates to your customers with data direct from their source.

Contact your IBM or Maersk sales rep today to find out how you can increase productivity, cut down on query response times and drive greater customer satisfaction.
